Fuel Set FCC is a complete fuel conditioner that provides comprehensive protection of the fuel system, which in turn reduces running and maintenance costs.

PART NUMBER: 1266

FEATURES

Treats all fuels

Petrol, diesel, red diesel, biofuel, gasoil, two stroke, heating oil

Suitable for all engines & storage tanks

Cars, coach, bus, road haulage, marine, agriculture, domestic boilers

Application

Dose at 4000:1, either directly in a vehicle, or in holding tanks

Environmentally Responsible

Non-toxic, non-flammable, non-biocide, non-corrosive, biodegradable, pH neutral

BENEFITS

Removes free water & treats emulsified fuel

Water is the source of most engine problems and most fuel is contaminated to some extent mainly due to condensation. Fuel Set FCC treats this water so it can no longer cause harm to the engine.

No more Diesel Bug

The dreaded Diesel Bug can only survive where free water is present – Fuel Set FCC deals with the water providing protection against Bug infestation. If the Bug has already infested, Fuel Set FCC disperses the Bug colonies without using deadly biocides.

Biofuel benefits

Today's fuel contains a proportion of biofuel that attracts and absorbs water and provides food for the Diesel Bug. Fuel Set FCC protects against this ever-increasing risk.

No more blocked filters

Fuel Set FCC's action disperses the Bug. Individual cells pass through the filter and are burnt away harmlessly in the combustion process (unlike a Biocide that creates a mass of dead cells that can block filters, fuel lines and fuel gauges)

Reduces maintenance and downtime

Fuel Set FCC prolongs the life of filters and catalytic converters. It cleans the whole fuel system including the pump and injectors. Gums, waxes, resins and acids are removed from the fuel system. Fuel Set FCC removes carbon build up from combustion chambers, exhaust ports and turbines and it reduces the production of sulphur oxide (sulphuric acid) that can cause corrosion.

Reduces wear

Fuel Set FCC adds lubrication throughout the fuel system, reducing wear in the engine and fuel related components, i.e. pump & injectors. This is important because today's low/zero sulphur fuels lack the lubrication the sulphur provided.

Restored economy

A clean engine produces a cleaner, more efficient burn, so your engine recovers fuel economy that had been lost due to the build-up of deposits and contaminants.

Lower Emissions

A cleaner burn produces lower harmful emissions, Nitrogen dioxide (NOx) and Carbon Monoxide (CO)

Smoother running & improved performance

No more rough spots or misfiring, more power and improved fuel economy.

Prolongs fuel life, rejuvenates old fuel

Fuel Set FCC neutralises the acids that make old fuel stale and unusable and keeps it fresh for longer.

Winter protection

Lowers the point at which fuel waxes in low temperatures for protection all winter.

Economical

Fuel Set FCC is a COMPLETE fuel conditioner – no need for numerous separate additives. Use it at 4000:1 each time you top up, for total protection and all these benefits. (2000:1 on first use)

Don't wait until you have a problem – start using it today!.
